

Presenting...
The Endless Summer

brought to you by

SUNSTAR
Solar Pool Heating

TM

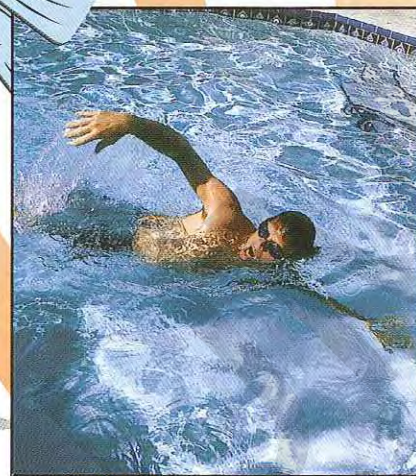

The Endless Summer is as close as your own backyard!

A SunStar Solar Pool Heating System will extend your Summer Fun well into the spring and fall.

Relaxation that whisks you away from the everyday can only happen when the water is the perfect temperature.

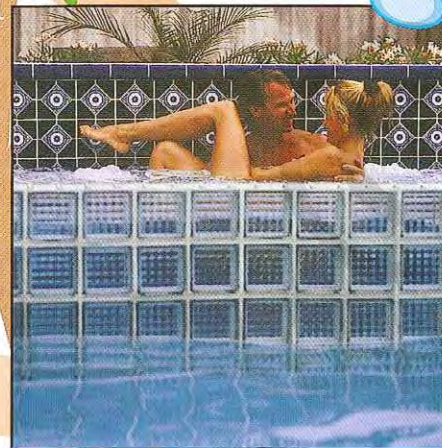

Warm water and regular exercise are a natural fit.

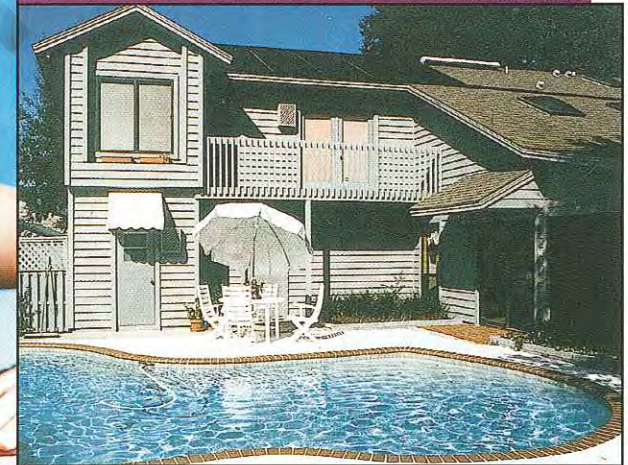

Warm water makes your pool the perfect setting for parties, get togethers or just relaxing.

Your backyard becomes a place where people are brought together by a warm, luxurious pool.

Thank You SunStar!

Why Heat Your Pool with Solar?

OPERATING COSTS - Eliminate high, on-going monthly fuel bills by heating your pool with free, abundant energy from the sun. A solar pool heating system can pay for itself in as little as two years.

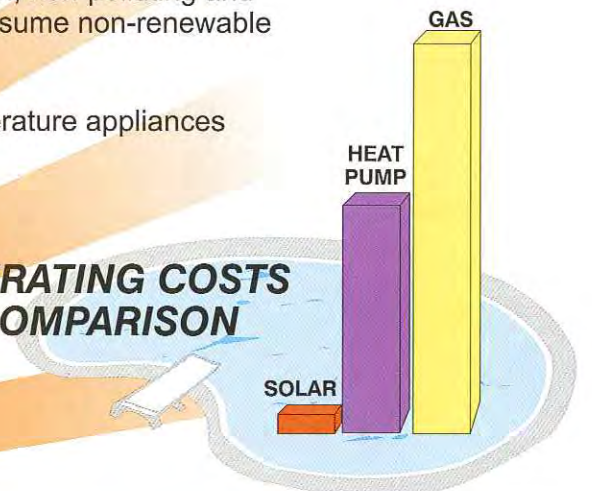

MAINTENANCE COSTS - Solar collectors are not affected by corrosive pool chemicals and contain no moving parts to break down.

WARRANTY COVERAGE - A 12 year full, lifetime limited warranty gives you protection and peace of mind long after typical pool heater warranties expire.

THE ENVIRONMENT - Solar pool heating is clean, non-polluting and environmentally safe. Other heating methods consume non-renewable fossil fuels and pollute the environment.

SAFETY - Solar pool heating uses no high temperature appliances and requires no on-site storage of volatile fuels.

Solar Pool Heating

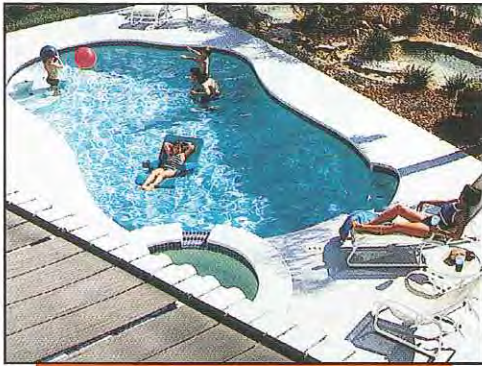

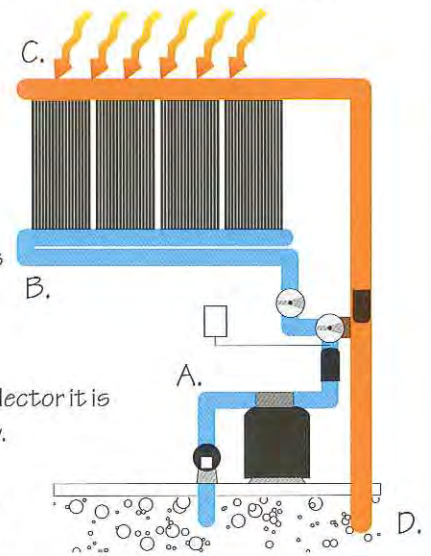

The SunStar Difference!

Design Features & Benefits

-  Patented individual tube design virtually eliminates wind load and allows your roof to breathe.
-  Innovative mounting pad installation system in most cases requires only one roof penetration per collector.
-  Single piece construction eliminates seams or welds between headers and risers. This makes the collector rugged and reliable.
-  Full 12 year warranty includes freeze protection and a bonus lifetime limited warranty.
-  Having manufactured solar collectors since 1977, this panel is the newest design from the world's largest solar pool collector manufacturer.

How Solar Pool Heating Works

- Using your existing pool pump, pool water is directed through a series of valves to your solar collectors.
- Pool water enters the solar collectors at the bottom and rises to the top through the individual tubes of the collector.
- As the water rises through the collector it is heated by the sun's radiant energy.
- The water is then returned to your pool to repeat the cycle until your pool has been warmed by the sun.
